

SAVE TIME. SAVE MONEY.

INTRODUCING **MECTINITE™**

A proven, non-restricted use CAUTION label 4% emamectin benzoate formulation that will protect trees with fast uptake and fast clean-up that gets you off to the next tree faster. Mectinite gives you the power, speed, and performance you need to **SAVE MORE TREES.**

"I have been using this product for just over a month or so now. I have done multiple tests with this product side by side along with other 4% products out there on the market and here is what I have found. Traditionally my injection window during a work day would go from 7:30 am to about 2:00 pm then the trees would totally shut down and stop taking chemical. My first test with Mectinite I did at 3:45 pm on a 22" ash tree. The uptake was about 6 minute and 30 seconds. While another product took 19 minutes and 42 seconds going into another tree that was the same size.

I started using Mectinite on my residential work and went from \$8k revenue days to \$25k revenue days. I am thoroughly impressed with the price and performance of this product and the science that backs it. By the start of next year every PHC division in my company will be using it."
